

SPRING MEETINGS 2023 WASHINGTON DC WORLD BANK GROUP INTERNATIONAL MONETARY FUND

Developing Capacity for Public Debt Projections and Analysis with the Public Debt Dynamics Tool (DDT)

**APRIL 10, 2023** 

Marie-Pierre Aquino Coste Economist (ICD) Leonardo Martinez Senior Economist (ICD)

## What is the Public Debt Dynamics Tool (DDT)?

Spring Meetings 2023 IMF

2

The Public Debt Dynamics Tool (DDT) is a **simple** Excel-based tool that projects the **public debtto-GDP ratio** under a baseline and **alternative scenarios**.

Because of its simplicity, the DDT is useful for **helping countries develop capacity** on public debt projections and analysis.

Realism and Fiscal Adjustments	
debt levels in 2026:	
historical and constant pb scenarios

#### **Contribution to Changes in Public Debt**

## Why do we use the Public Debt Dynamics Tool (DDT)?

The <u>LIC DSF</u> (Debt Sustainability Framework for Low-Income Countries) and <u>SRDSF</u> (Sovereign Risk and Debt Sustainability Framework for Market Access Countries ) are the official IMF tools for projecting public debt and debt sustainability analysis

STAFF GUIDANCE NOTE ON THE SOVEREIGN RISK AND DEBT SUSTAINABILITY FRAMEWORK FOR MARKET ACCESS COUNTRIES

#### **EXECUTIVE SUMMARY**

This note provides operational guidance for the use of the Sovereign Risk and Debt Sustainability Framework (SRDSF), which replaces the Debt Sustainability Framework for Market Access Countries. The SRDSF introduces improvements in organization, methodology, transparency, and communication when analyzing public debt issues in countries that mainly finance themselves with market-based debt. After its phased adoption beginning [June 2022], it will become the Fund's principal tool for assessing public debt sustainability.

Online: Debt Sustainability Framework for Low Income Countries (LIC DSFX) The Public Debt Dynamics Tool (DDT) is a **much simpler** tool that requires much less data.

Because of the DDT's **more limited scope** (e.g., the DDT does not produce a debt sustainability assessment)

Because the DDT projects public debt using **fiscal balance projections** instead of the more difficult to obtain projections of issuances and amortizations Even with a different approach, the Public Debt Dynamics Tool (DDT) can replicate the baseline public debt projections of the LIC DSF and the SRDSF, and thus the DDT can be a steppingstone for understanding these more comprehensive frameworks.

	Actual		Est.	Projections								
	2012-2018 2/	2012-2018 <sup>2/</sup> 2019 20		2021	2022	2023	2024	2025	2026	2027		
Nominal gross public debt	44.2	48.7	58.9	 61.9	62.9	63.0	63.4	63.9	64.3	64.8		
Of which: guarantees (uncalled) <sup>3/</sup>	0.3	3.8	3.3	2.3	2.0	1.8	1.5	1.4	1.4	1.5		
Real GDP growth (in percent)	3.8	2.7	-9.0	4.2	3.7	3.4	3.7	3.8	3.8	3.8		
Inflation (GDP deflator, in percent)	4.4	4.1	4.0	4.0	3.7	3.8	3.7	3.7	4.0	4.0		
Nominal GDP growth (in percent)	8.3	6.9	-5.3	8.4	7.5	7.3	7.5	7.7	8.0	8.0		
Effective interest rate (in percent) 4/	5.8	6.2	6.3	6.2	5.8	5.9	6.2	6.4	6.4	6.5		

#### Debt and Economic Indicators <sup>1/</sup>

Because of its simplicity the Public Debt Dynamics Tool (DDT) has proven useful for **sustainable capacity development**:

Very busy government officials can run the DDT on their own, even after frequent staff turnover.

The DDT is already being used in several countries to improve policymaking including internal discussions, debt reports, and communication with IMF staff.

#### Өрийн тогтвортой байдлын шинжилгээ

Өрийн тогтвортой байдлын шинжилгээнд аливаа улсын Засгийн газрын өр, ДНБ-ний харьцаа 50 хувиас давсан тохиолдолд тухайн улсыг "Сайтар шинжлэх" шаардлагатай орны ангилалд багтаан илүү нарийвчилсан шинжилгээг хийдэг. Монгол Улсын Засгийн газрын нэрлэсэн өрийн үлдэгдлийн ДНБ-д эзлэх харьцаа 2020 онд 75.5 хувь байгаа ба 2023 он хүртэл Засгийн газрын өрийн баталгаа гаргаагүй тохиолдолд тус харьцаа 70 хувиас их байхаар төсөөлөгдөж байгаа тул "Сайтар шинжлэх" шаардлагатай орны ангилалд орж байна.

Сүүлийн 10-н жил болон ирэх 3-н жилийн Засгийн газрын өр, ДНБ-ний харьцаа хэрхэн өсөж, буурахаар байгааг Графикт харууллаа. Засгийн газарын өрийн хэмжээ 2012-2016 онд ихээхэн хэмжээгээр өссөн байна. Үүнд Засгийн газар баталгаа гаргаж эхэлсэн, төсөв алдагдалтай батлагдсан, валютын ханш суларч байсан зэрэг үзүүлэлтүүд ихээхэн нөлөө үзүүлжээ. Харин Засгийн газрын өр, ДНБ-ний харьцаа 2017-2019 онуудад буурсан нь ДНБ-ний өсөлт болон бодит хүүгийн түвшний бууралт зэргээс хамаарсан байна. Цаашид ч бодит ДНБний өсөлтийг дэмжиж, төсвийн үндсэн тэнцлийг бууруулах нь өрийн тогтвортой байдлыг хангах суурь үндэс болохоор байна. 2022-2023 онуудын хувьд валютын ханш 2.8 болон 4.1 хувиар суларч, төсвийн үндсэн тэнцэл алдагдалтай байхаар төсөөлөгдсөн ба тус онуудад бодит ДНБний өсөлт өндөр байхаар төсөөлөгдөж байгаа нь өрийн ДНБ-д эзлэх харьцааг бууруулах гол хүчин зүйл болохоор байна.

## How do we use the Public Debt Dynamics Tool (DDT) for Capacity Development?

The Public Debt Dynamics Tool (DDT) is one of the tools developed by the IMF Institute of Capacity Development for its **new Macro Framework Technical Assistance Practice** focused on macroeconomic forecasting and policy analysis for policy decision-making and communication.

Integration into policy

Training

Because of the Public Debt Dynamics Tool (DDT) simplicity, DDT Technical Assistance has achieved results **very quickly** 

after **short virtual meetings** (e.g., one hour per week for a couple of months)

and/or short face-to-face missions (e.g., one week or less),

often following DDT Training

Table 1: Results of the sensitivity analysis Gross debt levels in % of GDP, by confidence interval

	2022	2023	2024	2025	2026
PERCENTILE 10-25	54.3	52.6	51.3	51.1	50.5
PERCENTILE 25-50	55.5	54.8	54.2	53.8	53.9
<b>BASELINE SCENARIO</b>	57.6	57.6	57.7	57.8	57.8
BASELINE SCENARIO PERCENTILE 50-75	<b>57.6</b> 60.1	<b>57.6</b> 61.0	<b>57.7</b> 61.4	<b>57.8</b> 62.3	<b>57.8</b> 62.7

The Public Debt Dynamics Tool (DDT) is also featured in the **IMF training program**,

in DDT-focused workshops,

and standard courses including the **Fiscal Sustainability course.** 

The online course **DDTx**:

- available in English and <u>French</u> (and soon in Spanish).

- 5 to 6 hours to complete

- **1000 learners** have already worked with the DDTx.

Virtual, face-to-face, and blended training.

Online: Projecting Public Debt - The Public Debt Dynamics Tool (DDTX)

## DDTx videos are also available on YouTube,

in the IMF Institute Learning Channel,

organized in three playlists:

1. Projecting public debt

2. <u>Projecting public debt with the Public</u> <u>Debt Dynamics Tool (DDT)</u>

3. <u>Calculating possible fiscal adjustment</u> paths with the Public Debt Dynamics Tool (DDT)

## **Projecting public debt**

IMF Institute Learning Channel 8 videos No views Updated today

Play all

 $\overrightarrow{a}$ :

💢 Shuffle

In this playlist, you will learn how to project the evolution of public debt (i.e., government debt) over time, for a given set of projections of the relevant macro-fiscal variables. The playlist covers simple calculations you can use to project the public debt level for the following year. The videos present these calculations with simple numerical examples for a hypothetical country. This document https://courses.edx.org/assets/courseware/v1/ v1:IMFx+DDTx+2T2022+type@asset+block/Mo presents the equations used in the playlist. Additional information can be found in the online course DDTx https://bit.ly/DDTxcourse

## Overview of the Public Debt Dynamics Tool (DDT)

### The DDT's Debt Dynamics Equation

The debt-to-GDP ratio evolves according to:

$$d_t = \frac{1 + \hat{r}_t^w}{1 + g_t} d_{t-1} - \mu_t p b_t + \mu_t o f_t \tag{1}$$

• 
$$1 + \hat{r}_t^w = \frac{\alpha_{t-1}(1+i_t^f e_t^{avg}/e_t^{eop})(1+\varepsilon_t^{eop}) + (1-\alpha_{t-1})(1+i_t^d)}{1+\pi_t}\mu_t$$
: cost of debt.

•  $g_t, \pi_t, \varepsilon_t^{eop}, i_t, e_t^{avg}, e_t^{eop}, \alpha_t$ : real GDP growth, inflation, exchange rate depreciation, effective interest rate, average and end-of-period exchange rates, share of foreign currency debt

•  $\mu_t = (1 - \alpha_t (1 - e_t^{avg} / e_t^{eop}))^{-1}$ : coefficient of stock-flow adjustment due to intra-year exchange rate fluctuations.

## Color rules in the Public Debt Dynamics Tool (DDT)

- Information and relevant data should only be entered in yellowshaded cells, which are in worksheets with yellow tabs.
- Light yellow-shaded cells are used to indicate that the user can select the input from a drop-down menu.
- White cells contain formulas that users should not override.

### The DDT's Input-Data worksheet

## In the Input-Data worksheet, we need to manually input the data needed for projecting public debt with equation (1).

Let's watch a <u>video</u> describing the main contributors to debt changes in the baseline scenario.

## Alternative scenarios in the Public Debt Dynamics Tool (DDT)

23

Historical scenario: Key debt drivers take average historical values and thus, this scenario triggers discussions about the differences between baseline assumptions and historical values.

Historical averages

Historical Scenario						
Real GDP growth	4.2	2.4	2.4	2.4	2.4	2.4
Inflation	4.0	4.4	4.4	4.4	4.4	4.4
Primary balance	-4.0	-1.7	-1.7	-1.7	-1.7	-1.7
Effective interest rate	6.2	5.8	5.8	6.0	6.2	6.2

**Constant-primary-balance scenario:** The **primary fiscal balance** takes the value of the first projection year and thus, this scenario shows the importance of the fiscal consolidation in the baseline.

#### Constant primary balance

Constant Primary Balance Scenario														
Real GDP growth	4.2	3.7	3.4	3.7	3.8	3.8								
Inflation	4.0	3.7	3.8	3.7	3.7	4.0								
Primary balance	-4.0	-4.0	-4.0	-4.0	-4.0	-4.0								
Effective interest rate	6.2	5.8	5.9	6.2	6.4	6.4								

**Shock scenarios:** The Public Debt Dynamics Tool (DDT) also presents scenarios with a shock to each key debt driver (primary balance, growth, interest rates, depreciation rates).

#### Stress Tests Inputs

#### Stress testing scenario design: size of shocks

- Primary balance shock
- GDP growth shock
- Interest rate shock
- Exchange rate depreciation shock

#### Stress testing scenario design: duration of shocks

Primary balance shock starts Primary balance shock ends GDP growth shock starts GDP growth shock ends Interest rate shock starts Interest rate shock ends Exchange rate depreciation shock starts Exchange rate depreciation shock ends

We are working on a new template, the ND\_DDT, that computes the effect of past **natural disasters** in all DDT macrofiscal variables, facilitating the construction of natural disasters scenarios.

Select event	148	Country name	Honduras		
Pre-shock value	Average	Disaster Type	Storm		
Number of years for average	1	Year	1998		
Post-shock value	WEO Oct 2022				
Number of years	3				
First year of the shock	2023

## **Fiscal consolidation scenarios**

## Fiscal consolidation inputs in Readme

#### Adjustment Paths Inputs

Debt target and adjustment period

To be completed	l after "Input - Data'	" is populated
-----------------	------------------------	----------------

Public debt-to-GDP target (e.g., for 60 percent of GDP, write 60) Adjustment path starts Adjustment path ends

60.0	
2025	
2035	

Additions to Baseline Assumptions for Fiscal Adjustment Paths (for time-varying values)	2020	2021	2022	2023	2024
---	------	------	------	------	------

 $\alpha_t$ : share of foreign currency denominated debt in total debt, percent of total debt (excl. guarantees)

 $e_t$ : nominal average exchange rate, local currency per unit of foreign currency

 $e_t$ : nominal end-of-period exchange rate, local currency per unit of foreign currency

 $i_t^{d}$ : nominal effective interest rate on local currency denominated debt, percent

 $i_t^{f}$ : nominal effective interest rate on foreign currency denominated debt, percent

 $\pi_t$ : GDP deflator inflation, percent

g<sub>t</sub>: real GDP growth, percent

of t: other net-debt creating flows, percent of GDP

With these inputs, the Public Debt Dynamics Tool (DDT) computes automatically different **fiscal adjustment scenarios** 

level and yearly change of the primary balance

that yield a 60% debt ratio in 2035 7/

1.0

0.1

Let's watch a <u>video</u> describing one of the fiscal adjustment scenarios.

## Conclusions

Spring Meetings 2023 | IMF

33

### In sum

- The Public Debt Dynamics Tool (DDT) is tailored for do-it-yourself capacity development
- The DDT's simplicity allows for the sustainable transmission of knowledge to a variety of counterparts
- Many countries are using the DDT, including for public debt reports
- We are always happy to talk (and even more so about the DDT!):
  Marie Pierre Aquino Coste: <u>maquinocoste@imf.orq</u>

  - Leonardo Martinez: <u>Imartinez4@imf.org</u>
