WORLD BANK GROUP
INTERNATIONAL MONETARY FUND

THE IMF'S NEW

Climate Change Indicators Dashboard

Experimental Data for Economic and Financial Analysis

April 9, 2021
10:00 A.M.—11:00 A.M.

As we prepare for the virtual 2021 Spring Meetings, allow us to highlight **the launch of IMF's new Climate Change Indicators Dashboard (CID)**. It provides access to climate-related data for macroeconomic and financial analysis, including economic and climate indicators such as greenhouse gas emissions; financial, physical and transition risk indicators such as carbon footprint-adjusted loans; cross-border indicators; and policy indicators. The dashboard was built in collaboration with international organizations and aims to support policy makers and the general public, in addition to the IMF's work.

Join us on April 9, at 10 AM ET, for an overview of these experimental indicators! We will show the novel interface and how it can help you access data for your analysis and visual presentations. As you start using it, we welcome your feedback too. Our goal is to keep developing it based on your needs.

See you at the launch,
STA Climate Change Indicators Dashboard (CID) Working Group
